

Records Management System.

A working demo for Maine State Archives.

HORUS TECHNOLOGY

AWS Advanced Partner · Anthropic Partner

100% staff certified

THE PROBLEM

Eight miles of records.
A *five-day* statutory clock.
A finite archivist team.

8 mi

of permanently valuable State records
— county court files back to 1639

5 days

FOAA statutory clock to acknowledge
every citizen request — Maine Title 1
§408-A

3×

regulatory pressures hitting at once:
retention, FOAA, legal hold

The math doesn't work.

You can't keep up with exponential record volume by hiring linearly. The only thing that scales is AI doing the cognitive work, while humans make the decisions.

RECORDS INTAKE

ARCHIVIST HEADCOUNT

OWN PRODUCTION WORKLOAD — HIGH-VOLUME
HANDWRITTEN CORRESPONDENCE

5x

200 → 1,000+ items / day. 60K docs / month. 50% cost reduction. Same headcount.

Plus: human-in-loop review · change-management · AI pipeline. All three costed.

Federal precedent: NARA's **Electronic Records Archives** — **900 TB · 800M files · 100+ federal agencies**, under OMB M-19-21 / M-23-07 to a **30 June 2024** deadline.
CoSA 2023, Joy Banks: 19% of state archives operate with ≤9 FTE; only 23.5% spend >50% time on electronic records. Work grew. Labor pool did not.

Block 1 gave hours back. Block 2 protects them.

ENCRYPTION

TLS 1.3

In transit

AES-256

At rest

FIPS-validated KMS

Key management

IDENTITY

SAML 2.0 / OIDC

Active Directory federation

RBAC + MFA

Role-based access

State-standard timeouts

Session policy

AUDIT

Immutable log

Append-only

SIEM-exportable

Every change

5-year retention

Forensic-grade

All three audit options your RFP accepts — through AWS shared-responsibility reports:

FedRAMP

ISO/IEC 27001

SOC 2 Type II

IBM Cost of a Data Breach 2024 (Ponemon, 604 orgs): public-sector breach **USD 2.55M** · **258 days** mean dwell time · **USD 2.2M** saved by orgs using AI extensively in prevention · **26.2%** YoY cyber-skills shortage. **Maine statute:** Title 5 §95-C four retention criteria · §95-C patron-confidentiality · Title 1 §408-A 5-day clock · NIST SP 800-88 · Maine OIT BackUp + BC · WCAG 2.1 AA.

Automation is not a feature. *It is the system.*

LIBRARY OF CONGRESS · NEWSPAPER NAVIGATOR

ML across **16M pages of Chronicling America**. Bounded outputs · confidence-scored · cataloger on review. **Keyboard work moved off the cataloger's desk**. **Appraisal stayed where it belongs**.

NIST AI RMF 1.0 · JAN 2023

Four trustworthiness controls for AI in regulated workflows: **bounded outputs · uncertainty + escalation · traceability · accountability**.

01 / BOUNDED OUTPUTS

Bedrock Claude Sonnet

tool_use pattern · JSON schema

Model returns structured JSON, not free-form text. **Hallucination is bounded by design** — there is nothing to hallucinate into.

02 / UNCERTAINTY + ESCALATION

0.85 confidence threshold

Auto above · human review queue below

Every classification carries a confidence score. **Low-confidence records route to a human**, not auto-accepted.

03 / TRACEABILITY

Claude Vision · Titan v2 + pgvector

Native PDF · sub-second four-mode search

OCR on PDFs to ~100 pages with handwriting. Search across keyword, phrase, semantic, hybrid. **Every result traces back to source page**.

04 / ACCOUNTABILITY

EventBridge cron · append-only audit

90 / 30 / 7-day windows · DB-enforced

Disposition dates set on classification. **Audit log refuses updates and deletes** at the database layer.

TWO PRODUCTION DEPLOYMENTS — SAME STACK Vital records · 40+ US state health departments · HIPAA · 80% time reduction · 98% success · 10× throughput / no headcount · **EdTech catalogs** · 4,000+ universities · 250K pages/yr · 98% accuracy · 100:1 ROI · \$1.16M–\$4.76M audited annual savings

Same team. New tools.

The backlog shrinks.

01 / BLOCK 1

Hours given back.

The backlog shrinks when the repetitive work stops landing on the archivist's desk — the 5-day clock stops being a fire drill.

02 / BLOCK 2

Hours protected.

Rules live in the code, not in someone's head. Compliance is the default — not the discipline.

03 / BLOCK 3

It IS the system.

NIST AI RMF. Library of Congress. Two of our own production deployments. 1639 → 2026, in one catalog, one search bar.

3–5× *the throughput. Architectural headroom up to* **10×**.
Full audit trail. Zero compliance lapses.

Questions?

We're ready to go deep — on architecture, compliance, fixed-price scaling, migration, hallucination handling, anything you want.
