Section 1.0 – Introduction

This document constitutes File 3 of the proposal submitted by Horus Technology (Interesting Interests Inc.) in response to RFP# 202603058 issued by the State of Maine, Department of Secretary of State, Maine State Archives. This file contains the completed Qualifications and Experience Form (Appendix D), the Subcontractors Form (Appendix E), an organizational chart, a litigation disclosure, applicable licensure and certifications, and a Certificate of Insurance.

The information provided herein demonstrates Horus Technology's qualifications, relevant past performance, and organizational capacity to deliver the Records Management System described in the RFP Scope of Work. All projects referenced below were completed within the past five years and reflect direct experience in cloud-based systems implementation, document management, compliance-driven software development, and government-facing technology delivery.

Section 2.0 – Organizational Overview (Appendix D)

STATE OF MAINE

Department of Secretary of State – Maine State Archives

RFP# 202603058 | Records Management System

Bidder Name:	Horus Technology (Interesting Interests Inc.)
Legal Entity Type:	S-Corporation (California)
EIN:	47-5285423
CA Entity Number:	3837112
Year Established:	2015
Principal Address:	4720 Moccasin Place, San Diego, CA 92117
Chief Executive:	Michael Huy Walker, Founder & CEO
Phone:	(714) 515-0242
Email:	michael@horustech.dev
Business Classification:	Software Consulting / AWS Cloud Solutions
Certifications:	DGS California Small Business Certified; AWS Advanced Consulting Partner

✓ Statement of Qualifications

Horus Technology (legally Interesting Interests Inc.) is a California-based software consulting firm specializing in cloud architecture, intelligent document processing, and enterprise application development on Amazon Web Services. Founded in 2015 and

headquartered in San Diego, California, Horus Technology operates as a lean, agile organization with a distributed team of senior engineers, cloud architects, and project managers, enabling the firm to deliver enterprise-grade solutions with the responsiveness and cost efficiency of a specialized boutique consultancy.

Horus Technology holds AWS Advanced Consulting Partner status, reflecting the firm's demonstrated expertise across the full AWS service portfolio. The firm's engineering team collectively holds more than 16 AWS certifications spanning foundational, associate, professional, and specialty levels, including AWS Certified Solutions Architect, AWS Certified Developer, AWS Certified DevOps Engineer, and AWS Machine Learning Specialty. This depth of certified expertise directly supports the technical requirements of the Maine State Archives Records Management System.

The firm's core competencies are directly aligned with the functional and technical requirements of this RFP, including:

- Cloud-based SaaS platform implementation, configuration, and integration on AWS infrastructure.
- Secure data architecture with AES-256 encryption at rest, TLS 1.2+ in transit, and AWS KMS key management.
- Role-based access control (RBAC), multi-factor authentication (MFA), and identity federation via SAML 2.0 and OpenID Connect.
- API integration development connecting cloud platforms with existing enterprise systems including CRM, ERP, and archival management tools.
- Records management workflow design including retention schedule configuration, disposition management, and transmittal tracking.
- Data migration from legacy systems with validation, transformation, and audit trail preservation.
- ADA/Section 508 accessibility compliance and WCAG 2.1 standards implementation.
- 24/7 managed services, ongoing compliance monitoring, and support SLA management.

Horus Technology has a proven track record of delivering compliance-critical systems for regulated industries including financial services, education, and enterprise manufacturing. The firm's client portfolio includes engagements with Ford Credit, Bank of Montreal, Experian, Porsche Digital, and DegreeData — each requiring the same combination of security rigor, regulatory alignment, and technical precision demanded by Maine State Archives.

As a DGS California Small Business certified firm, Horus Technology brings the agility and responsiveness of a small business while delivering technical capabilities and project outcomes typically associated with much larger organizations. The firm's lean

organizational model ensures that senior decision-makers and technical leads are directly engaged on every project, with no dilution of expertise through layers of management.

Section 3.0 – Past Performance Projects

The following three projects, completed within the past five years, demonstrate Horus Technology's experience and expertise in performing the functions described in Part II – Scope of Services of this RFP. Each project reflects the firm's capabilities in cloud-based system implementation, data management, security compliance, API integration, and government-adjacent regulated environments.

Project One: Ford Credit (via Ricoh USA)	
Client Name:	Ford Credit (via Ricoh USA)
Client Contact:	Ashok Shenoy, Delivery Lead – Document Management Solutions
Telephone:	(610) 296-8000
E-Mail:	ashok.shenoy@ricoh-usa.com
Project Start/End:	Q4 2021 – November 2022
Approximate Value:	\$2,645,000
Brief Description of Project: Horus Technology designed and implemented an intelligent, cloud-based document classification and routing system for Ford Credit, the financial services arm of Ford Motor Company. Ford Credit processed hundreds of thousands of incoming customer documents daily across loan applications, payment inquiries, and service requests — all requiring manual review and departmental routing. Horus Technology replaced this manual process with an automated AWS-native pipeline using Amazon Textract for OCR-based document extraction, Amazon Comprehend for content classification, and Amazon A2I (Augmented AI) for human-in-the-loop verification on edge cases. The solution reduced document routing time by over 90%, achieved 98%+ classification accuracy, and eliminated the need for manual document review across four departments. AWS Step Functions orchestrated the end-to-end workflow, while MySQL database integration enabled seamless departmental handoff. Horus Technology provided comprehensive post-launch managed services including 24/7 monitoring, SLA reporting, and system optimization.	
Relevance to This RFP: <i>This project demonstrates Horus Technology's ability to design, implement, and manage a cloud-based document and records management system at enterprise scale — directly analogous to the Maine State Archives RMS requirement for secure ingestion, classification, and retrieval of both digital and physical records. The firm's experience with OCR-based document processing, audit trail generation, and compliance-driven workflow design maps directly to the RFP's requirements for advanced search, metadata extraction, and records tracking.</i>	

Project Two: Experian – VIN Compliance Verification System	
Client Name:	Experian – VIN Compliance Verification System

Client Contact:	Available upon request
Telephone:	Available upon request
E-Mail:	Available upon request
Project Start/End:	2022 – 2023
Approximate Value:	Confidential (available upon award)

Brief Description of Project:

Horus Technology developed an intelligent, serverless compliance verification system for Experian's automotive compliance division, automating the extraction and cross-verification of Vehicle Identification Numbers (VINs) across high volumes of scanned purchase documents and financing agreements. The solution leveraged Amazon Textract for VIN extraction from PDFs and handwritten forms, Amazon Comprehend for unstructured text analysis, and Amazon Bedrock for generative AI-powered anomaly detection. The architecture used AWS Lambda, AWS Step Functions, and Amazon DynamoDB to orchestrate and track the end-to-end compliance workflow. Results included a 90% reduction in VIN processing time (from 6–8 hours to under 30 minutes), 98.7% extraction accuracy, a 94% reduction in compliance violations, and \$4.2 million in annual operational savings. Horus Technology also provided regulatory audit support, implementing full CloudTrail-based audit logging and automated compliance reporting.

Relevance to This RFP:

This project demonstrates Horus Technology's expertise in compliance-driven data management, audit trail generation, and automated regulatory adherence — core requirements of the Maine State Archives RMS. The firm's experience designing systems that enforce compliance rules, generate audit-ready reports, and manage document workflows at high volume directly supports the RFP's requirements for records disposition tracking, transmittal management, and retention schedule enforcement.

Project Three: DegreeData – Enterprise Educational Data Platform

Client Name:	DegreeData – Enterprise Educational Data Platform
Client Contact:	Available upon request
Telephone:	Available upon request
E-Mail:	Available upon request
Project Start/End:	2022 – 2024
Approximate Value:	\$800,000+ in documented client savings

Brief Description of Project:

Horus Technology architected and delivered a cloud-native enterprise records and data management platform for DegreeData, a company that collects, standardizes, and manages academic records and course catalog data from over 500 educational institutions. The platform replaced a legacy manual process requiring 8–12 hours per document batch with an automated AWS pipeline processing records in 1.5–2 hours with 95% data extraction accuracy. The solution used Amazon Textract and Amazon Bedrock to extract and standardize structured data from unstructured transcripts and forms, Amazon OpenSearch for real-time search across millions of academic records, and Amazon QuickSight for dynamic reporting dashboards. Amazon RDS (MySQL) managed transactional records data, while Amazon S3 provided durable archival storage with lifecycle policies. The platform processed records

from 500+ institutions simultaneously with full SLA compliance and achieved 180% ROI within 14 months. Horus Technology delivered a phased migration from the legacy system and continues to provide 24/7 managed services.

Relevance to This RFP:

This project is the most directly analogous past performance reference to the Maine State Archives RMS requirement. DegreeData's platform combines the exact functional elements required by this RFP: secure cloud-based records management, advanced search and metadata indexing, role-based access control, real-time analytics dashboards, API integration with external systems, data migration from a legacy platform, staff training, and ongoing support. The scale (500+ institutions, millions of records) and compliance requirements of the DegreeData platform reflect capabilities that far exceed the scope required for this engagement.

Section 4.0 – Organizational Chart

The following organizational chart depicts the project structure proposed for the Maine State Archives Records Management System implementation. Each position is identified by title and corresponds to the personnel job descriptions and roles described in Section IV – Proposed Services.

HORUS TECHNOLOGY — PROJECT ORGANIZATIONAL CHART RFP# 202603058 | Records Management System | Maine State Archives

Principal-in-Charge / Account Director <i>Michael Huy Walker</i>		
Technical Project Manager <i>[To Be Assigned]</i>	Solution Architect (AWS/Cloud) <i>[To Be Assigned]</i>	
Senior Full-Stack Engineer <i>[To Be Assigned]</i>	DevOps / SRE Engineer <i>[To Be Assigned]</i>	Business Analyst <i>[To Be Assigned]</i>
QA Analyst / Tester <i>[To Be Assigned]</i>	Technical Writer <i>[To Be Assigned]</i>	

All personnel assigned to this project will be experienced professionals with demonstrated expertise in their respective disciplines. Horus Technology maintains a network of vetted, AWS-certified engineers and project professionals who are engaged on a project basis, consistent with the firm's lean startup model. Final personnel assignments will be confirmed upon contract award and will be subject to Department approval for key positions as required by the contract.

Section 5.0 – Litigation Disclosure

✓ Current Litigation

Horus Technology (Interesting Interests Inc.) has no current litigation in which the firm is named as a party. There are no active lawsuits, arbitration proceedings, or administrative actions pending against the firm as of the date of this proposal submission.

✓ Closed Cases (Past Five Years)

Horus Technology (Interesting Interests Inc.) has no closed cases within the past five years in which the firm paid a claimant either as part of a settlement or by court decree. The firm has not been subject to any judgments, settlements, or adverse findings in any civil, criminal, or administrative proceeding during this period.

Additionally, as confirmed by the California Secretary of State Statement of Information filed May 17, 2024, no officer or director of Interesting Interests Inc. has an outstanding final judgment issued by the Division of Labor Standards Enforcement or a court of law for violation of any wage order or provision of the Labor Code.

Section 6.0 – Licensure and Certifications

The following licensure and certifications are applicable to the proposed services and are submitted in support of Horus Technology's qualifications for RFP# 202603058.

Certification / License	Issuing Authority	Status
California Small Business Certification (SB)	CA Dept. of General Services (DGS)	Active
San Diego Business License (B2022011194)	City of San Diego	Active (2025)
AWS Advanced Consulting Partner	Amazon Web Services	Active
AWS Certified Cloud Practitioner	Amazon Web Services	Active
AWS Certified Developer – Associate	Amazon Web Services	Active
California S-Corporation (Entity #3837112)	CA Secretary of State	Active

Copies of applicable certifications and licenses are attached as supporting documentation to this submission.

Section 7.0 – Certificate of Insurance

Horus Technology (Interesting Interests Inc.) maintains active general liability and professional liability insurance coverage as evidenced by the Certificate of Liability Insurance issued by Next First Insurance Agency, Inc. The policy details are summarized below. The full ACORD 25 Certificate of Liability Insurance is attached to this submission.

Insured:	Interesting Interests (Horus Technology), 4720 Moccasin Pl, San Diego, CA 92117
Insurance Producer:	Next First Insurance Agency, Inc., PO Box 60787, Palo Alto, CA 94306
Producer Phone:	(855) 222-5919
Insurer:	State National Insurance Company, Inc. (NAIC# 12831)
Policy Number:	NXTYX3T9FQ-00-GL
Policy Effective Date:	August 2, 2024
Policy Expiration Date:	August 2, 2025
Commercial General Liability:	Each Occurrence: \$1,000,000 General Aggregate: \$2,000,000
Professional Liability:	Each Occurrence: \$1,000,000 Aggregate: \$2,000,000
Certificate Number:	483194990

Horus Technology will provide an updated Certificate of Insurance naming the State of Maine as an additional insured upon contract award, in accordance with the requirements of the resulting IT Service Contract.

Section 8.0 – Subcontractors Form (Appendix E)

STATE OF MAINE

Department of Secretary of State – Maine State Archives

RFP# 202603058 | Records Management System

Bidder Name:	Horus Technology (Interesting Interests Inc.)
---------------------	---

Horus Technology does not intend to utilize any subcontractors in the performance of the services described in this RFP. All project activities, including technical implementation, systems integration, data migration, training, and ongoing support, will be performed directly by Horus Technology personnel and contracted resources under the direct supervision and management of the firm's Principal-in-Charge, Michael Huy Walker.

Should a subcontracting need arise during the performance of the contract, Horus Technology will notify the Department in advance and submit the required subcontractor

information for approval prior to engaging any subcontractor, in accordance with the terms of the resulting contract.

No subcontractors will be used in the performance of this contract.
