Section 1.0 – Introduction

This document constitutes File 2 of the proposal response submitted by Horus Technology (Interesting Interests Inc.) in response to RFP# 202603058 issued by the State of Maine, Department of Secretary of State, Maine State Archives. This file contains the completed Eligibility Certification Form (Appendix C) and supporting documentation demonstrating compliance with each of the four Pass/Fail eligibility requirements defined in Part I, Section C of the RFP.

Each eligibility requirement is addressed affirmatively below. Supporting narrative and documentation references are provided for each requirement to substantiate the Bidder's compliance. Failure to meet any one of these requirements would render a Bidder ineligible; Horus Technology confirms full compliance with all four requirements.

Section 2.0 – Appendix C: Eligibility Certification Form

STATE OF MAINE

Department of Secretary of State – Maine State Archives

RFP# 202603058 | Records Management System

Bidder's Organization Name:	Horus Technology (Interesting Interests Inc.)
------------------------------------	---

Eligibility Certification	Response
The Bidder must be able to store data at geographically disparate locations within the US and in other locations not prohibited under U.S. law. The storage locations used must be assignable by AIP. It must be possible to select at least two locations within the continental US that are at least 500 miles apart.	☒ Yes ☐ No
All data must be encrypted in transit and at rest.	☒ Yes ☐ No
The Bidder agrees to make initial customizations to the code and to maintain the code over time to achieve and stay in compliance with the State of Maine's records management laws and rules.	☒ Yes ☐ No
Bidder is required to have support for this system within the State of Maine.	☒ Yes ☐ No

Section 3.0 – Supporting Documentation: Requirement 1

Geographically Disparate Data Storage

✓ Requirement

The Bidder must be able to store data at geographically disparate locations within the US and in other locations not prohibited under U.S. law. The storage locations used must be assignable by AIP. It must be possible to select at least two locations within the continental US that are at least 500 miles apart.

✓ Response

Horus Technology confirms full compliance with this requirement. The proposed Records Management System will be hosted on Amazon Web Services (AWS), which operates a network of data centers across the continental United States. The AWS infrastructure enables geographically redundant storage configurations that fully satisfy the 500-mile separation requirement.

Specifically, Horus Technology will configure the solution to leverage the following AWS regions, each separated by more than 500 miles:

- US East (N. Virginia) — Primary Region: AWS Region us-east-1, located in Northern Virginia.
- US West (Oregon) — Secondary Region: AWS Region us-west-2, located in Oregon, approximately 2,800 miles from us-east-1.

Data storage across these two regions will be configured using AWS S3 Cross-Region Replication (CRR), ensuring that all records data is automatically and continuously replicated between the two designated locations. Storage location assignment will be fully configurable by the Agency Information Personnel (AIP) through the system's administrative interface, allowing Maine State Archives staff to designate and adjust storage locations as needed in compliance with applicable law.

Additional storage locations within non-prohibited jurisdictions outside the continental US may be enabled upon request, subject to applicable U.S. law and State of Maine data governance policies.

✓ Key AWS Services Supporting This Requirement

- Amazon S3 with Cross-Region Replication (CRR) for automatic multi-region data redundancy.
- AWS S3 Object Lock and Versioning for data integrity and retention compliance.
- AWS IAM and S3 Bucket Policies for AIP-controlled storage location assignment.
- AWS CloudTrail for full audit logging of all data access and storage events.

Section 4.0 – Supporting Documentation: Requirement 2

Data Encryption in Transit and at Rest

✓ Requirement

All data must be encrypted in transit and at rest.

✓ Response

Horus Technology confirms that all data within the proposed Records Management System will be encrypted both in transit and at rest, using industry-standard cryptographic protocols and AWS-native encryption services.

✓ Encryption at Rest

All data stored within the system, including records metadata, document content, user data, and audit logs, will be encrypted at rest using the Advanced Encryption Standard (AES-256). This is enforced through the following AWS mechanisms:

- AWS Key Management Service (KMS) with customer-managed keys (CMKs) for full control over encryption key lifecycle, rotation, and access policies.
- Amazon S3 Server-Side Encryption (SSE-KMS) applied to all stored objects by default.
- AWS RDS Encryption enabled on all database instances, encrypting data files, automated backups, snapshots, and read replicas.
- AWS Hardware Security Module (HSM) integration available via AWS CloudHSM for agencies requiring FIPS 140-2 Level 3 validated key storage.

✓ Encryption in Transit

All data transmitted between users and the system, between system components, and between AWS services will be encrypted in transit using Transport Layer Security (TLS) version 1.2 or higher. Specifically:

- All web application traffic enforces HTTPS with TLS 1.2+ via AWS Application Load Balancer (ALB) with SSL/TLS termination.
- All API communications are encrypted end-to-end, with HTTP-to-HTTPS redirects enforced at the application layer.
- Inter-service communications within the AWS environment use encrypted channels and VPC-level network isolation.
- AWS Certificate Manager (ACM) manages and auto-renews SSL/TLS certificates, eliminating manual certificate management risk.

This encryption architecture meets or exceeds the requirements of NIST SP 800-111 (encryption of stored data), NIST SP 800-52 (TLS guidelines), and the State of Maine OIT security standards referenced in the RFP.

Section 5.0 – Supporting Documentation: Requirement 3

Code Customization and Maine Records Management Law Compliance

✓ Requirement

The Bidder agrees to make initial customizations to the code and to maintain the code over time to achieve and stay in compliance with the State of Maine's records management laws and rules.

✓ Response

Horus Technology formally agrees to this requirement and is uniquely positioned to fulfill it. As a cloud solutions and custom software development firm with demonstrated experience delivering compliance-driven systems for enterprise and government clients, Horus Technology has the technical capability, staffing model, and development methodology to configure, customize, and maintain the Records Management System in continuous alignment with Maine records law.

✓ Initial Customizations

Upon contract award, Horus Technology will perform a comprehensive analysis of the State of Maine's records management laws and rules, including but not limited to the Maine State Archives statutory framework and applicable administrative rules, to ensure the deployed system incorporates all required configurations. Initial customizations will include:

- Configuration of records retention schedules in accordance with Maine State Archives standards and applicable statutes.
- Implementation of disposition workflow logic aligned with Maine's records disposition authorization processes.
- Configuration of designated records officer roles, transmittal workflows, and agency-specific access controls.
- Integration with ArchivesSpace and other existing Maine State Archives systems as specified in the RFP Scope of Work.
- Customization of the self-service agency portal to reflect Maine State Archives branding, terminology, and workflow requirements.

✓ Ongoing Compliance Maintenance

Horus Technology commits to providing ongoing code maintenance and compliance monitoring throughout the contract term and all renewal periods. This includes:

- Proactive monitoring of changes to Maine records management statutes and administrative rules, with system updates implemented within agreed timelines upon notification by the Department.

- Regular software updates, security patches, and version releases to maintain compliance with evolving State of Maine OIT policies and standards.
- Dedicated change management procedures to document, test, and deploy compliance-driven code modifications with full version control and rollback capability.
- Annual compliance review sessions with Maine State Archives staff to confirm continued alignment with current law and operational requirements.

Horus Technology's track record of delivering and maintaining compliance-critical systems — including the VIN Compliance Verification System for Experian and the Enterprise Loan Processing Platform for Bank of Montreal — demonstrates the firm's ability to meet ongoing compliance obligations at enterprise scale.

Section 6.0 – Supporting Documentation: Requirement 4

Support for the System Within the State of Maine

✓ Requirement

Bidder is required to have support for this system within the State of Maine.

✓ Response

Horus Technology confirms full compliance with this requirement. The firm will establish and maintain a dedicated support model providing comprehensive, responsive system support to Maine State Archives personnel throughout the contract term. This support structure is specifically designed to serve users operating within the State of Maine and is described in detail below.

✓ Dedicated Maine Support Coverage

Horus Technology will designate a named Maine State Archives Support Lead who will serve as the primary point of contact for all support requests originating from the Department. This individual will maintain support coverage aligned with Maine business hours (Monday through Friday, 8:00 a.m. to 5:00 p.m. Eastern Time) and will be reachable by phone, email, and the project's dedicated ticketing system.

In addition to the Support Lead, Horus Technology will maintain a backup support tier to ensure continuity of coverage during planned and unplanned absences. All support personnel will be fully briefed on the Maine State Archives implementation, Maine records management law requirements, and the specific configuration of the deployed system.

✓ Support Service Levels

Horus Technology commits to the following service level standards for Maine State Archives:

Issue Severity	Initial Response Time	Target Resolution Time
Critical (System Down)	2 Business Hours	8 Business Hours

High (Major Function Impaired)	4 Business Hours	1 Business Day
Medium (Minor Function Impaired)	1 Business Day	3 Business Days
Low (General Inquiry / Enhancement)	2 Business Days	10 Business Days

✓ Support Channels

- Dedicated ticketing system with a Maine State Archives-specific support queue, accessible via web portal and email.
- Direct phone and email access to the assigned Maine State Archives Support Lead during Maine business hours.
- Online knowledge base and searchable help documentation tailored to the Maine State Archives implementation.
- Escalation path to Horus Technology senior engineering staff for complex technical issues requiring development-level resolution.
- 24/7 monitoring of system uptime and performance, with automated alerts and on-call engineering response for critical outages.

✓ Ongoing Training Support

Horus Technology will provide ongoing training opportunities for Maine State Archives staff, including new user onboarding sessions, annual refresher training, and targeted training materials for system updates and new features. All training will be available via live virtual session, recorded video library, and written documentation, ensuring accessibility for staff across the State of Maine regardless of location.
